Bursal ultrastructural characteristics of the common carp Ctenopharyngodon idellus were investigated with the use of transmission and scanning electron microscopes. The bursa of Fabricius of carp is a thin-walled, spherical structure located on the ventral side of the anterior abdominal cavity. The bursa has an outer epithelial membrane with folds and multiple villi. The bursal secretory cells are grouped as clusters of cells scattered throughout the bursal parenchyma. Cell size, shape, ultrastructure, and the presence of large endocytic vesicles are all similar in the cells of bursal secretory zones. The bursal epithelial cells include varying numbers of rough endoplasmic reticulum, Golgi apparatus, and secretory granules. We also demonstrate the presence of several types of heterophilic and homophilic cells which possess their own secretory areas in the bursa of the common carp.Q: When should I use command instead of a sublime-command when writing a plugin for Sublime? I've written some very basic plugins in the past using PackageResourceViewer and following the documentation for Adding Packages. When writing these, I've just been using the example command rather than a sublime-command file. Is this preferred, or is there a reason to use a sublime-command file? It is an international association of national research institutes, universities, and other entities concerned with fundamental research in the field of particle physics. Its headquarters are at the Parc Científic de Barcelona, in the city of Barcelona, Spain. Particle physics was isolated as a scientific field in the early twentieth century, and received scientific recognition at the time of the First Solvay Conference in 1911. By the 1950s, research in particle physics had become well established in a number of countries, especially in the United States and in Western Europe. CERN was created to bring together and coordinate the activities of researchers involved in these centres of activity. CERN is a membership organisation. CERN Member States are those of the European Union, plus Switzerland, Turkey, and Ukraine. It also has several Associate Member States, plus observatories and other laboratories associated with CERN in a number of countries outside Europe. The observatories associated with CERN are the Gran Sasso Laboratory in Italy, the Karlsruhe Nuclear Microprobe Laboratory in Germany, the Gran Sasso National Laboratory in Italy, the Russian Novosibirsk Nuclear Research Center, the INFN Laboratori Nazionali di Frascati, the Karlsruhe Institute of Technology and the National Institute of Standards and Technology, all located in Italy, plus the Fritz Haber Institute in Berlin, Germany.
