ProjectFuture is a project management tool that uses a visual interface to provide you with a total picture of your project and a chance to plan and manage your project activities. Desktop Base - Project Application I received this program with a five-piece Microsoft Silverlight application. The target audience for this program is the casual Microsoft Windows user. The presentation, graphics, and feedback may appeal to the casual user. The reviews I received were generally positive in all aspects except limited control over the colors of the project.

Project Application Description: Incorporate your projects, tasks and reports into business directories or websites with the easy to use Desktop Base project application. Gives you

- An overview of all projects and their progress
- An overview of all tasks and their progress
- Short cuts to open tasks and reports
- A task list for a specific project
- Access to private tasks and to your contact's tasks
- Push notifications
- New and completed tasks included in your project
- Social integration via Facebook or Twitter
- Ability to link to external accounts
- Listing of documents with a project shortcut
- Emailing task reports
- Linking tasks to calendars
- Color coding of projects and tasks
- Many more features

First of all, this is an innovative software product offering a superb user experience for the casual Microsoft Windows user. I liked how it pulled of "one window" and the layed out arrangement; no matter the project, tasks, reports, and whatever is displayed will fit for an organized overview for a user to see. First of all, the program is easy to use; it only takes a few minutes to get a base up and running and ready to work for you. It offers a really simple and easy-to-use Windows Store client, with a set of customizable tools to work with your projects. It's one of the simplest and easiest program's I've ever used in trying to manage my projects. It's really well organized with buttons in the bottom toolbar for getting different functions such as "Project Overview", "Task List", "Actions", "Settings", "Log", and "Reports" that makes it easy to manage and organize a project. For example, as we go to the "Project Overview" menu
