----- 433326 NOTES: 1. Note to Australia ISP's: Firewall 0 for those that wish, rather than a network leak. 2. Dynamic DNS: loc6.ns.pdns.net:6625 3. We are trying to prevent the DNS hijacking of links on some virus or trojan sites, and there is currently one single point of failure. 4. We have tested with some success a bunch of different DNS servers, and have been using loc6.ns.pdns.net, which seems to come closest. 5. There is some possibility of DNS leak when caching the results to client, so this may not work in very long term. 6. There are more servers available, but we've been testing the one, loc6.ns.pdns.net:6625, and there were a few problems with others, due to their being identified as partially under NSI control, which was part of the original intent for the project. 7. If the TTL on your server is bigger than 4 hours, adjust the servers/deflation windows accordingly. 8. This is a "work in progress" and progress is slow, but it's best to have something rather than nothing. 9. This code is available, and the DNS servers are running, and some of the DNS servers are available to the public. 10. We want to use the same topology as the
