A: There is a built-in tool for converting text to Unicode called recode. It is part of the GNU coreutils package. It's a nice tool that was recommended to us by someone who worked for the Debian project. Recode can convert to and from UTF-8, UTF-16, UTF-32 and ISO-8859-x (analogous to the various Windows encodings). It preserves the length of input, with the exception of UTF-16 big-endian. The downside is that it's not as perfect as the UTF-8 conversion tools out there. It's also a little more involved to get things working than the other conversion tools. I don't know whether it's still maintained. In the days before Unicode was officially introduced, people used to claim that everything could be represented by UCS-2, or UCS-2 extended with the concept of surrogate pairs. This led to the rise of various unofficial code pages, like IBM/DOS-1251, ISO-8859-5, CP-437 and CP-437-based applications like LaTeX. But in the meantime, we've seen a lot of UTF-8 in the wild. It's likely that one day this utility will be obsoleted. I can't give any install instructions right now because I have a different computer. If you need more details, you'll have to wait for someone who has experience with it. If you want to use it yourself, then I suggest you go find a copy of the tar.gz archive on the web. Many packages are published as tarballs.

Receptor for advanced glycation endproducts (RAGE) mediates the secretion of proinflammatory cytokines in diabetic microvascular cells: potential role in the pathophysiology of diabetic microvascular complications. Increased plasma levels of receptor for advanced glycation end products (RAGE) have been correlated with the development and progression of the diabetic micro- and macroangiopathies, including nephropathy. We have examined whether the gene expression of RAGE in endothelial cells is responsive to the presence of high glucose concentration and whether the gene expression is associated with the secretion of proinflammatory cytokines in cultured endothelial cells. The expression of RAGE mRNA was investigated by real time quantitative RT-PCR analysis in HUVEC cells subjected to high glucose (20 mM) incubation for up to 72 h. Using ELISA, we quantified the levels of TNF

What's New in the Character Set Converter?

===== You know that there is a long list of different character sets. And also you know that the different GUI file dialogs have a different input method. What you don't know is that the file dialogs are simply wrappers around the same NSOpenPanel class that you can use to set the

input encoding to UTF-8, UTF-16, UTF-16BE (Big Endian), UTF-32 or other character sets. You also don't know that the NSOpenPanel class uses UTF-8, UTF-16, UTF-16BE (Big Endian), UTF-32 or other character set internally. You need to convert documents from one character set to another. You want to use the document and not only the current input method. You want to change the input method if you use a different Mac OS. You want to change the file dialog if you use a different file dialog. Character Set Converter solves all these problems. It provides a command line converter. It provides a GUI converter. And it provides many other things like auto detecting of UTF-8, UTF-16, UTF-16BE (Big Endian), UTF-32 or other character sets, document conversion, document and selection conversion. All in-memory conversion is done automatically and it supports unlimited file sizes. The GUI gives you a lot of options to choose from. The help system provides a list of all available options to help you. Character Set Converter also supports DOS, Apple, total over 60 character sets (Arabic, Belarusian, Bulgarian, ...) and UTF-8. Newer character sets can be added easily. Features:
===== * A command line converter. * More than one GUI converter. * Auto detects UTF-8, UTF-16, UTF-16BE (Big Endian), UTF-32 or other character sets and provides the right GUI converter. * Converts documents from one character set to another. The documents can be documents, selections or documents in selections. * Very small, portable, zero installation. No installation, no dependencies. * License is not perpetual. No "in perpetuity". Just one-time. * Just a single command line tool, no dependencies and no GUI. * A help system with a list of all available options. * Three types of GUI: plain text, simple and advanced. * Can be used as a server. * No dependencies, no GUI. No installation, just
