How to add a watermark to your script. The feature allows you to apply a watermark to your exported video or to automatically inject your text watermark into the video. This tutorial will show you how to install your watermark into a project. This process is done from the color area. To add your own watermark, head to the Water Mark section, find the area where you want to position your text and drag in the color you want the watermark to appear. How to use text shadows in your script. You can control the appearance of all text shadows in the text panel, including their color, opacity, rotation, and size. To control the text shadows, head to the Text Shadow section. Set the Width, Height and Radius values to control the appearance of the text shadow. You can also change the Color of the shadow, use the Opacity to control the amount of blending of the shadow from the background and by default, the shadow is always on top of other text. How to add a picture-in-picture effect to your script. Add captions to pictures in motion. Make a picture play inside a text box. Control any video or picture from your script in a timeline. To add a picture-in-picture effect, head to the Picture-in-Picture section and click the Add Picture-in-Picture button. Then locate the video or picture you want to make visible or invisible within the text box, and insert the video or picture into the Text Box. It is advisable that you make use of the dir attribute which allows you to set the base direction of text for display. This is essential to support languages that use right-to-left scripts such as Arabic, Hebrew, N'Ko, Syriac, and Thaana. Many different languages are written with these scripts, including Arabic, Dhivehi, Hebrew, Mandinka, Pashto, Persian, Pular, Sindhi, Syriac, Urdu, Yiddish, etc.
