whether or not it is a good thing is debatable. a great example of a defi that is not a good thing is the first decentralized finance service that was released. openbazaar was an interesting experiment in decentralized finance that was popular with those who were looking for a new way to get free stuff. olympus has fallen is a good defi story that has been made better by the fact that its not just a movie about a big bank robbery. its also about a small group of people trying to save the day and doing what they have to in order to do it. and its about an industry that is still in its infancy and that will become more important as time passes. on christmas day, 1993, the headquarters of the united states secret service in washington, d.c. is attacked by terrorists who capture the president of the united states. the assailants demand the immediate release of hundreds of prisoners held at the facility. as special agent mike banning (gerard butler) is the only agent remaining in the building, he must find a way to thwart the terrorists from holding the president and the american people hostage. the action-packed thriller also stars aaron eckhart, richard jenkins, morgan freeman, melissa leo, michael shannon, angela bassett, lena headey, ed harris and scott caan. the film's screenplay was written by dean devlin, james vanderbilt and john gatins. its music was composed by ramin djawadi. the staking issue might be the most telling, however. olympus is a fascinating project, but it may be fatally flawed. it has long had more questions than answers. moreover, it has introduced a stack of problems to the community that took weeks to untangle, while its staking model makes community governance a breeze.

the olympusdao treasury will be used to provide stable funding and liquidity for the ecosystem. this will allow developers to create new financial applications and services. the stable funding will be made available to developers in the form of dai. the project uses a three-tier governance system, where a core group of five people has complete control over the dao and its operations, while the community has control over new dao proposals and governance votes. the core group is the founding team of olympusdao, with the remaining five people being chosen by a combination of what the community has to say and what the core team recommends. olympusdao makes use of a treasury of digital assets that are held in reserve. the initial dao is set at 100 million dai. this will be supported by small dai withdrawals from the open market and interest on dai held in the treasury. this will be backed by assets from the olympusdao treasury. as with dai, olympus is designed to be open source. so while the core team is able to make policy, the community can also make policy. the community can create proposals for the treasury and vote on them. the core team is also involved in the community governance, but this is in a supporting role. olympus dao can be used as a stablecoin in itself, or it can be used as a mechanism to fund any project or organization that wants a stable coin. it can also be used to track the health of a stablecoin. theres a raft of theories why olympus has lost investors confidence, but it seems clear that the projects byzantine complexity and unorthodox mechanics are fueling the outrage. irate investors this week have branded olympus a ponzi scheme that is using its liquidity protocols to enrich early entrants at the expense of latecomers. jordi alexander, the cio at digital asset trading firm, selini capital, characterized olympus as a syndicate in a well-circulated piece on medium entitled the godsfather, a play on zeus and the classic mafia film.
