
Shelter 2 FULL Extra Quality

the story is told in a humorous way, but there are times when there is an overbearing seriousness. theres an entire section of the game called the disaster and this play is so disturbing. theres a family ripped apart by a tornado, and theres a hole in the ground, and theres a lot of blood. its a disturbing scene because it reminds you that in real life, this is what happens. still, on the good side, the team has done wonders with the sound effects and score. it certainly makes up for the bad-written dialogue. with a good soundtrack and a dynamic soundscape, shelter 2 goes from survival to atmosphere. it has its own distinct signature for atmosphere, as the sound design and soundtrack has managed to distinguish itself through each and every zone. the sound of the panther is easily the best in the game, while the tiger smashes its head around as if trying to get the best seat at the drum set. eventually, you'll find the mother is being mauled by the wolves and you can't hunt any more rabbits - in fact there's no amount of starvation that will let you hunt the next morning. the only way you can survive is to go back to the den and wait until the lynx is ready to feed. this is going to suck because you're going to be babysitting a cub until it's old enough to be your constant companion. it'll play out the same each day, though it is possible to get a female cub to feed twice a day. if you put the cub on the mother's back, she'll be fine. you can sit next to the cub and nurture it and hope it grows up to be a good hunter, but theres nothing that shows its progress. after a while, the cub will grow impatient and start to wander off. they're good at finding their way, but they'll lead you to the closest bait. theres nothing to do when you get there but sit back and hope they decide to feed. the cubs, especially the most intelligent one, will learn and change their behaviour to find better meals, but they're still limited to the typical catch to catch ratio.

Shelter 2 FULL

this reticence to consider how a pack dynamics works and how the relationships inter-relate comes from the fact that the player can only ever interact with the cubs and not with the entire pack. packs of wolves are not sims, so some hidden subtleties are lost. theyre also a very different beast from wolves to humans, as i discovered when playing as a cub. one of the main features of the wolves model is the survival instincts that are activated when a cub loses its pack. when you change packs in the game, it will still trigger these instincts. this is usually a good thing but the pack remaining in-check explains why i felt so at ease for most of the game, even when being told to watch out for a dangerous new pack. theres just a couple packs on the map to keep an eye on at a time, but theyre out of sight, out of mind. all the fighting is going on in the woods. i know that ive been protected because i havent been shot at. theres been plenty of skirmishes and clashes to keep my attention, but it misses the point that i should be paying closer attention to the main story. i also feel that theres been a lot of inconsistencies in my character progression, and i feel that the developers felt rushed. i started with the same rifle i left the game with and there have been a couple times where theyve made me use a different one. they've also made me start with a pistol instead of rifle for no reason. i started out with a plain outfit (obvious flaws) and i should have been able to get the best possible items by the end of the game. i mean, theres a sniper rifle in the game, but i cant find it without cheating. it doesnt even save to the cloud so that i can use it later. the scientists really screwed up on something. 5ec8ef588b
