## What's New In Infinitex?

Visual Studio-like editor in LaTeX and TeX with powerful LaTeX parsing (cite, \input and \include) engine. Optimization of  $O(n^2)$  to  $O(n \log n)$  Consider this  $O(n^2)$  time and space search problem. Input: An array A of integers of size n A number b from 1 to n Output: Return the index of the integer b in A For example, for A = [5, 4, 3, 2, 1], b = 1, the correct answer is 1. For b = 2, the answer is 2. I was thinking to use an extra array, C, to count the times the elements of A are in the range of b. The elements of C will be initialised to 0. This is the outline of my code. `int A[], C[]; int find(A, b) { int x, y, i; for(i = 0; i < b) { A[x] = A[x] - 1; ++C[A[x]]; } else { ++C[A[x]]; ++C[A[x]]; ++C[A[x]]; } ++y; ++x; } return C[b]; }` If I had to guess, this algorithm would run in  $O(n \log n)$
