Source: Microsoft Windows - Windows Update Windows 7 SP1 Update Rollup Windows 7 SP1 Update Rollup is an update rollup that includes various new fixes and improvements. The modifications range from performance boosts, security patches and bug fixes. Installing the updates comes with a series of recommendations to ensure that the process is carried out as simply and efficiently as possible. First of all, it should be noted that although they can also be retrieved via the Windows Updater component, they are optional and are rather easy to miss, as they are not automatically installed. Deploying them as soon as possible on the target computer is recommended, as they might fix crucial security or performance issues. Secondly, installing any language pack after setting up the updates requires you to reinstall the rollup. Therefore, it is recommended that users install language packs prior to deploying the updates. Microsoft released the Windows 7 Service Pack 1 (SP1) update to its operating system a while ago, including a host of changes and improvements, such as: Security improvements for users of Internet Explorer 9 Fixed bugs Performance improvements Windows 7 SP1 Update Rollup only works for Windows 7 Service Pack 1 (SP1) and Windows Server 2008 R2 operating systems. It is also worth mentioning that none of the updates are cumulative, meaning that users need to apply all the previous updates before deploying the new ones in order to benefit from the latest improvements, patches and fixes and make their operating systems more reliable. In its event log, Windows Update will inform you that the Windows 7 Service Pack 1 (SP1) update has been installed on your computer, as well as when it will be available for you to install. Windows 7 Service Pack 1 (SP1) Rollup Fixes Following the Windows 7 Service Pack 1 (SP1) update, users are prompted to install the Windows 7 Service Pack 1 (SP1) Update Rollup, which makes sure that all the known issues are fixed and the operating system performs better and more reliably. This update is mandatory for those who were affected by the following issues: Windows 7 Service Pack 1 (SP1) Update Rollup Installing Issues Windows 7 SP1 Update Rollup Installing Issues Microsoft has also identified other bugs that are worth patching, in addition to the known issues. This update is not mandatory for users who do not have any of the aforementioned issues. How to install Windows 7 SP

Launches the Windows Admin Center and deploys all Windows updates on that computer. Manual Upgrade: The user must be an administrator to run this command. Windows Server Core The following command installs the Windows Server Core feature of Windows Server 2012 in Windows Server 2012 R2. # wscntlm /configure wsconfig /enablefeature ServerCore Manual Upgrade: The user must be an administrator to run this command. Update Microsoft.NET Framework The following command installs the .NET Framework 4.6 on Windows 7 or Windows Server 2008 R2 and Windows Server 2012 and Windows 8. # wusa /update /cccccccccccccc /features KB2468838 /quiet /noreboot The command installs .NET Framework 4.6 on Windows 8 and Windows Server 2012 and Windows 8.1. The following command installs the .NET Framework 4.6 on Windows Server 2008 R2. # wusa /update /cccccccccccccc /features KB2468838 /quiet /noreboot The command installs .NET Framework 4.6 on Windows Server 2012 and Windows Server 2012 R2. The following command installs the .NET Framework 4.5.1 on Windows 7 and Windows Server 2008 R2. # wusa /update /cccccccccccccc /features KB2468428 /quiet /noreboot The command installs .NET Framework 4.5.1 on Windows Server 2008. The following command installs the .NET Framework 4.5 on Windows 7 and Windows Server 2008 R2. # wusa /update /cccccccccccccc /features KB2468428 /quiet /noreboot The command installs .NET Framework 4.5 on Windows Server 2008. The following command installs the .NET Framework 4.0 on Windows 7 and Windows Server 2008 R2. # wusa /update /cccccccccccccc /features KB2461716 /quiet /noreboot The command installs .NET Framework 4.0 on Windows Server 2008. The following command installs the .NET Framework 3.5 on Windows 7 and Windows Server 2008 R2. # wusa /update /cccccccccccccc /features KB2460129 /quiet /noreboot The command installs .NET Framework 3.5 on Windows Server 2008. The following command installs the .NET Framework 3 2edc1e01e8

The table below shows the Windows 7 Service Pack 1 Rollup. This rollup consists of many fixes and improvements. The changes include everything from security patches to reliability improvements. Component Software Name Size (MB) Description Version Number Date KB 3377158 Microsoft Windows Operating System Patch 67 This update applies to the following versions of the operating system: • Windows 7 Service Pack 1 for x64-based systems • Windows Server 2008 R2 for x64-based systems • Windows 7 Service Pack 1 for Itanium-based systems • Windows Server 2008 R2 for Itanium-based systems • Windows 7 for x64-based systems • Windows Server 2008 R2 for x64-based systems • Windows 7 for Itanium-based systems • Windows Server 2008 R2 for Itanium-based systems KB 3377154 Microsoft Windows Operating System Update for Windows 7 75 This update applies to the following versions of the operating system: • Windows 7 Service Pack 1 for x64-based systems • Windows Server 2008 R2 for x64-based systems KB 3377151 Microsoft Windows Server Update for Windows 7 Service Pack 1 69 This update applies to the following versions of the operating system: • Windows 7 Service Pack 1 for x64-based systems • Windows Server 2008 R2 for x64-based systems • Windows 7 for x64-based systems • Windows Server 2008 R2 for x64-based systems • Windows 7 for Itanium-based systems • Windows Server 2008 R2 for Itanium-based systems KB 3377148 Microsoft Windows Operating System Update for Windows 7 Service Pack 1 75 This update applies to the following versions of the operating system: • Windows 7 Service Pack 1 for x64-based systems • Windows Server 2008 R2 for x64-based systems • Windows 7 for x64-based systems • Windows Server 2008 R2 for x64-based systems KB 3377147 Microsoft Windows Operating System Update for Windows 7 Service Pack 1 74 This update applies to the following versions of the operating system: • Windows 7 Service Pack 1 for x64-based systems • Windows Server 2008 R2 for x64-based systems • Windows 7 for x64-based systems • Windows Server 2008 R2 for x64-based systems KB 3377146 Microsoft Windows Operating System Update for Windows 7 Service Pack 1

Lipid-lowering agents, such as 3-hydroxy-3-methylglutaryl coenzyme A (HMG-CoA) reductase inhibitors (statins), are widely used for the treatment of hypercholesterolemia and prevention of cardiovascular disease. These drugs increase plasma high-density lipoprotein cholesterol (HDL-C) and decrease plasma triglycerides in most patients with hypercholesterolemia. This lipid-lowering effect is believed to be related to the reduction of cholesterol synthesis, although the precise mechanism of action of statins has not been clearly established. As the therapeutic targets of statins are mostly liver-specific, we investigated the effects of atorvastatin, a commonly used statin, on the expression of genes responsible for the synthesis of cholesterol and triglyceride-rich lipoproteins in human hepatoma HepG2 cells. We found that atorvastatin potently induced the expression of the genes encoding 3-hydroxy-3-methylglutaryl coenzyme A synthase 2 (HMG

**System Requirements:**

Windows Vista 32-bit or Windows XP 32-bit Intel Pentium 4 CPU at 1.8GHz 1GB of RAM NVIDIA GeForce 7800 or ATI Radeon 9800 Pro or better graphics card DirectX 9.0c .NET Framework 4 [EDIT] We've received numerous reports that Silverlight 5 does not work with Windows 8. You may want to see this post for more details.DAVAO CITY - The so-called war on drugs is merely an excuse for President Duterte to go after
