The Quick Fix panel shortcut menu is an easy way to add text, adjust brush strokes, crop photos, straighten images and adjust their color and contrast. Setting up a color preset (setting the same font color for all your text in an image) is as easy as using the user interface (see the above image). The Pencil tool doubles for applying one of many new editing or drawing tools. You can add a line or shape, bunch or drag points to create a path, or use the Pencil and choose from a variety of directions and curved lines to draw everything from circles to rectangles to more elaborate line designs. Let's face it, not everyone knows the line tool. I'm not sure if it's a first time teacher issue or an issue with the whole concept of drawing with a computer system. But we'll call it one issue with teaching. More on that later. The blend tool makes it easy to add a special effect to your image when you first build it, and when you edit it. The Lens Blur filter is a favourite of mine. It creates incredibly cool lens-like effects. It's kind of a like a button you can easily press, so you can create very subtle, realistic looking blur effect by simply pressing this button. PhotoPix Pro has no way to blend different objects to create a new object, but I find this not a problem. No matter how complex my photo, Photopix Pro can edit my photo without me having to do a single thing. E-book, digital magazine, PDF and website management are some of the tools bundled with the new version. I don't really understand the new PDF tool, but am generally happy with it. Recent Develop does get more features, such as the ability to opt to compress a file to save space, a page measurement based on an actual page, and an integrated control panel. You can also now adjust colour effects from one photo to another, and it even allows you to create and apply a filter from one panel to another, as when you apply a filter to one image, the filter is automatically applied to another photo in the metadata. But the most interesting thing about the new Develop tool: it's a lightning fast tool. Switching quickly between photos is easy. The new options pane view is designed for best viewing and additional options to show/hide and hide with a double-click. The addition of search capabilities in with recent Develop updates is another plus and greatly enhances this application.
